

Required ESO Add-Ons

To fully utilize GuildSync, you must install the GuildSync ESO add-ons included in the `ESO` folder of this release.

The current GuildSync add-ons are:

- GuildSyncApplications
- GuildSyncBanking
- GuildSyncRoster

These add-ons are responsible for collecting data from ESO and exporting it through SavedVariables files that GuildSync can process.

Without these add-ons installed, GuildSync will still be able to retrieve Discord information, but it will not be able to receive any information from ESO.

GuildSyncApplications

Captures guild application information and related events.

Features include:

- Recording guild applications submitted through ESO
- Capturing application acceptance information
- Posting application information to Discord
- Supporting automated guild recruitment workflows
- Supporting automated welcome and onboarding processes

GuildSyncBanking

Captures guild bank deposits and raffle ticket information.

Features include:

- Tracking guild bank deposits
- Tracking raffle ticket purchases
- Supporting raffle reports and statistics
- Supporting guild contribution reporting

GuildSyncRoster

Captures guild roster information and roster history.

Features include:

- Guild member roster exports
- Rank tracking
- Rank history reporting
- Join and leave tracking
- Guild roster synchronization with GuildSync

Why These Add-Ons Are Required

ESO does not allow external applications to directly access guild, roster, banking, or application data while the game is running.

The GuildSync add-ons act as the bridge between ESO and GuildSync by collecting data and writing it to SavedVariables files whenever ESO saves data.

GuildSync then processes those files to provide reporting, Discord integration, member linking, and other guild management features.

Without the GuildSync add-ons installed and enabled, GuildSync cannot receive ESO data and many features will not function.
